**Renovation concept**

**Key renovation features**

- Central regulation
- Heat billing and metering of energy use

### **State-of-the-art**

<b>Before renovation</b>	<b>After renovation</b>
<i>Installations:</i>	<i>Installations:</i>
<ul style="list-style-type: none"><li>• No heat billing and metering of energy use</li></ul>	<ul style="list-style-type: none"><li>• heat billing and metering of energy use</li></ul>
<ul style="list-style-type: none"><li>• No central regulation</li></ul>	<ul style="list-style-type: none"><li>• Install central regulation</li></ul>

### **Energy saving and monitoring**

*Energy consumption before renovation:*  
KWh/m<sup>2</sup>: 136

*Energy consumption after renovation:*  
KWh/m<sup>2</sup>: 80  
Percentage saving<sup>1</sup>: 41%

### **Additional information**

- The main reasons for the renovation of installations have been an insufficient maintenance state, complaints of tenants regarding regulation and thermal comfort, further intention of the housing association to implement energy saving measures.
  - An examination of energy efficiency of the building was carried out.
- The recommended measures were the following:
- heat billing and metering of energy use,
  - Install central regulation

### **Lessons learned and conclusions**

- The housing association has proved that it is possible to renovate apartments installations radically, reach high energy savings and prevent rising of total living expenses. The benefit for the occupants is manifested through lower heating costs and higher level of thermal comfort.
